

BALL KHO GAYI XI

Player, Scorer and Leadership Guide

Mobile-first cricket management with MongoDB sync, live scoring, post-match scorecards, player profiles, teams, stats and chat.

Designed and developed by Swastik Shukla

1. Getting Started

The website is made mainly for phones. Open it in Chrome, Safari or another modern browser. Data is shared through MongoDB, so changes can appear on other devices.

- **New player:** tap Log in / Join, choose Request to Join, add your name, phone, jersey, role, photo and a private 4-6 digit PIN.
- **Existing player:** choose your account and enter your private PIN.
- **Keep your PIN private.** The login page does not show default PINs.
- **Install like an app:** use Add to Home Screen from your browser menu when available.

Player permissions

Role	Main access
Player	Own profile, role, jersey, photo, phone, availability, personal goal, stats and group chat
Vice-Captain	All player tools plus scheduling, notices, post-match scorecards, team maker and live scoring
Captain	All leadership tools plus live scoring and team control
Admin	Full website, player, opponent, branding, database and leadership control

Tip: use only one scorer at a time during a match to avoid conflicting ball entries.

2. Your Player Profile

Tap Account or My Room, then Edit My Profile.

- Change your full name, phone number, jersey number and class/section.
- Upload or replace your profile photo. The image is compressed before saving.
- Choose your primary role: Batter, Bowler, All-rounder or Wicketkeeper.
- Add a short cricket note such as batting style, bowling style or preferred position.
- Use Change PIN to create a new private login PIN.

Personal dashboard

- See matches, runs, wickets, catches, strike rate and economy.
- Check your batting and bowling ranks.
- Mark yourself Available, Maybe or Unavailable for the next fixture.
- Set a personal target for the next match.
- Open recent form and your best recent performance.

Phone privacy

A player can see their own number. Leadership and admin can see team phone numbers. Other players see a masked version.

3. Live Scoring

Live scoring is available to the admin, captain and vice-captain.

Before the first ball

- Open Match Center and tap Start Live Score, or tap Live in the mobile navigation.
- Select an upcoming fixture or create a custom live match.
- Choose which side is batting, the overs limit and an optional target.
- Enter the striker, non-striker and current bowler.
- Tap Start / Update Live Score.

During the innings

Button	What it records
0, 1, 2, 3, 4, 6	Legal ball and batter runs
Wicket	Wicket plus a legal ball
Wide / No-ball	One extra; not a legal ball
Bye / Leg-bye	One extra and a legal ball
Swap Strike	Manually changes striker and non-striker
Undo	Restores the score before the previous delivery

The scoreboard automatically calculates overs, run rate, extras, target remaining and batter runs/balls. It saves to MongoDB after each action.

- Use Change Players after a wicket or bowling change.
- Use Share Score to send or copy the current score.
- Use Use in Result Desk to copy the innings total into the post-match form.
- Tap End Innings when the batting innings is complete.

4. Post-Match Scorecards and Stats

The post-match desk remains available even when live scoring was not used.

- Open Add Completed Match from Match Center.
- Enter opponent, date, venue, overs, both team scores, toss, outcome and result summary.
- Use the table to enter each player's runs, balls, wickets, overs bowled, runs conceded and catches.
- Save the match. Player totals and leaderboards update automatically.
- Open Scorecard from any completed match to review it later.

School routine mode

When phones are not allowed at school, write the score in a notebook. Upload the full scorecard at home. This gives the same player statistics without needing live scoring.

Opponent teams

- Admin can create any opponent team and add temporary opponent players.
- Opponent rosters can change for every match.
- Our squad always appears separately under Ball Kho Gayi XI.

5. Team Tools and Chat

Practice Team Maker

- Leadership can shuffle the current squad into two practice sides.
- Players can be moved between sides after the automatic split.
- The two side names are editable.

Dressing Room Chat

- Every logged-in member can post short cricket messages.
- Messages sync through MongoDB and appear on other phones.
- Use chat for timing, availability, ground, kit and ball updates.
- Admin can remove messages.

Toss Room

- Choose the opponent and call Heads or Tails.
- Flip the animated coin and save the bat-or-bowl decision.
- The real toss can also be entered later in the result form.

Data safety

- MongoDB is the shared team database.
- The browser keeps a local backup for temporary internet problems.
- Admin can export and import a JSON backup.
- Do not share private PINs or database credentials in group chat.

6. Join the Cricket WhatsApp Group

Use the group for quick match reminders and then keep official player, match and score data inside the website.

Open WhatsApp Group

<https://chat.whatsapp.com/IHx3Ph3owBgFB0JYxm1vDp?s=cl&p;=a&mlu;=0&ilr;=0&amv;=2>

Quick match-day checklist

- Confirm availability before the match.
- Carry water, kit, ball and the score notebook.
- Decide who will score before play begins.
- Check striker, non-striker and bowler before tapping the first ball.
- Use Undo immediately when a wrong ball is entered.
- After the match, verify the scorecard before saving player performances.
